

Quack Quack What? — Design Document

Version: 1.0
Date: March 2026
Author: Taashi Manyanga
Trademark: © Taashi Manyanga 2026

1. Product Vision

Quack Quack What? is an AI skill evaluation platform that performs deep analysis on AI agent skills — whether sourced from GitHub repositories, web URLs, local file systems, or directly pasted code — to determine their safety, quality, and security posture.

Tagline: *“Just because it looks and sounds like a duck doesn’t always mean it’s a duck.”*

The platform empowers developers, security teams, and AI practitioners to verify that third-party agent skills are safe to deploy before integrating them into production systems.

2. Target Users

Persona	Description	Primary Need
AI Developer	Builds or integrates agent skills	Verify third-party skills before deployment
Security Engineer	Audits code for vulnerabilities	Automated security scanning of agent skills
Platform Operator	Manages AI agent marketplaces	Quality gate for submitted skills
Researcher	Studies AI agent safety	Comparative analysis of skill quality

3. User Experience Flow

3.1 Guest Flow (No Login Required)

1. User arrives at the Home dashboard
2. Sees “Guest mode” banner with sign-in prompt
3. Imports a skill via GitHub URL, web URL, local file, or paste
4. Animated analysis simulation runs
5. Full evaluation report displays with Safety, Security, and Quality scores
6. User can chat with LLM to refine the skill (requires AI provider config)
7. User can download the evaluation report

3.2 Authenticated Flow

1. User signs in via Google, GitHub, Apple, or email/password
2. Profile avatar and name appear in the header
3. All evaluations are linked to the user’s account
4. “History” page shows past evaluations with scores and timestamps
5. User can revisit any past evaluation

3.3 Documentation Flow

1. User clicks “Docs” in the header
 2. Full documentation suite renders in-app with 12 sections
 3. Covers product overview, capabilities, limitations, architecture, API reference, and more
-

4. UI Design System

4.1 Theme

- **Mode:** Dark-only cyber-analytical theme
- **Background:** Deep black/dark gray with subtle gradient orbs
- **Accent:** Primary color with neon glow effects
- **Panels:** Glass-morphism panels with subtle borders and backdrop blur

4.2 Typography

Usage	Font	Weight
Headings	Space Grotesk	Bold (700)
Body	Space Grotesk	Regular (400)
Code/Data	JetBrains Mono	Regular (400)
Labels	JetBrains Mono	Medium (500)

4.3 Color Palette

Token	Usage	Value
--primary	Accent, CTAs, active states	Brand primary
--emerald-400	Safety scores, pass indicators	#34d399
--blue-400	Quality scores, info elements	#60a5fa
--purple-400	Security scores, audit elements	#c084fc
--amber-400	Warning states, review needed	#fbbf24
--red-400	Critical findings, errors	#f87171

4.4 Components

- **Glass Panel:** Semi-transparent card with border, used for all content sections
- **Neon Text:** Glow effect on primary-colored heading text
- **Score Ring:** Circular progress indicator for scores (0-100)
- **Accordion:** Expandable finding lists grouped by category
- **Tabbed Interface:** Source type selector in SkillImporter

4.5 Layout

- **Max Width:** 5xl (1280px) for main content
 - **Spacing:** 12-unit header margin, 6-unit component gaps
 - **Fixed Elements:** Trademark badge (bottom-right), nav bar (top-right)
-

5. Page Inventory

Route	Page	Auth Required	Description
/	Home	No (Guest OK)	Main evaluator dashboard
/history	History	Yes	User's past evaluations
/readme	Documentation	No	Full documentation suite

6. Interaction Design

6.1 Skill Import

- Four tabs: GitHub, URL, Local File, Paste
- Input validation per source type
- Clear error messages for invalid sources
- Loading state during fetch

6.2 Analysis Animation

- Sequential phase display (Parsing → Pattern Matching → Security Scan → Quality Check)
- Progress bar with phase labels
- Auto-transition to results on completion

6.3 Evaluation Report

- Three-pillar score cards (Safety, Quality, Security)
- Overall weighted score with PASS/REVIEW classification
- Expandable accordion sections for detailed findings
- Download report as text file
- “Chat about this skill” transition to LLM chat

6.4 LLM Chat

- Message input with send button
- Structured response cards (Fitness, Feedback, Report, Refined Code)
- Code block with syntax highlighting for refined code
- Conversation history maintained across messages

7. Responsive Design

Breakpoint	Behavior
Mobile (<768px)	Single column, stacked cards, hidden desktop labels
Tablet (768-1024px)	Two-column score grid, condensed header
Desktop (>1024px)	Full three-column layouts, expanded navigation

8. Accessibility

- Semantic HTML elements throughout
- `data-testid` attributes on all interactive and data-display elements
- Keyboard-navigable tabs and accordions

- High contrast text on dark backgrounds
- Motion reduced via `prefers-reduced-motion` (Framer Motion)
